## THERMAL RIBBON PRINTERS

### FOR PRINTING BARCODES, INGREDIENTS, LOGOS AND MORE ONTO FILM PRIOR TO PACKAGING

The thermal ribbon printers are high-performance, cost-effective solutions tailored for a wide range of printing needs, including both fixed and variable text, data, and graphics. These printers excel in generating high-quality bar codes, real-time stamps, sell-by dates, batch numbers, prices, source codes, and many other types of information.

They are ideally suited for applications that require precise and clear printing such as labelling for products in the food, pharmaceutical, cosmetics, and automobile spare parts industries.

These printers are designed with versatility in mind, featuring two component models of brackets (Intermittent & Continuous) that facilitate seamless integration with various types of machinery.

This includes vertical and horizontal form-fill-seal systems, primary labellers, thermoformers, and overwrapping equipment.

The adaptability of the units ensures they are compatible with all intermittent and continuous application demands. Moreover, they possess the capability to code a wide array of 1D barcodes and 2D data matrix codes, making them indispensable tools for modern packaging and labelling processes.

## FEATURES

- Versatile printing capabilities for fixed and variable text, data, and graphics.
- Ideal for reproducing bar codes, real-time stamps, sell-by dates, batch numbers, prices, and source codes.
- Suitable for the food, pharmaceutical, cosmetics, and automobile spare parts industries.
- Two models of brackets (Intermittent & Continuous) for easy integration with various machinery.
- Compatible with intermittent and continuous applications.
- Capable of coding all kinds of 1D barcodes and 2D data matrix codes.
